1. The Rectangle Tag (<rect>)

Use Case: Used to create a rectangle or square shape.

Code Example:

```
<svg width="150" height="100">
  <rect width="100" height="80" x="25" y="10"
    style="fill:blue; stroke:red; stroke-width:3" />
</svg>
```

Result:

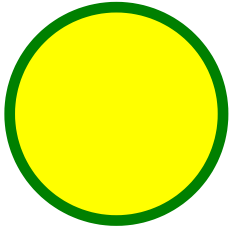

More Info: [W3C <rect>](#)

2. The Circle Tag (<circle>)

Use Case: Used to create a circular shape based on a central point and radius.

```
<svg width="150" height="100">
  <circle cx="75" cy="50" r="40"
    stroke="green" stroke-width="4" fill="yellow" />
</svg>
```

Result:

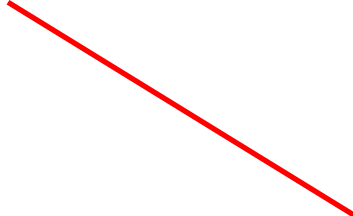

More Info: [W3C <circle>](#)

3. The Line Tag (<line>)

Use Case: Used to draw a straight line between two points.

```
<svg width="150" height="100">
  <line x1="10" y1="10" x2="140" y2="90"
    style="stroke:rgb(255,0,0); stroke-width:2" />
</svg>
```

Result:

More Info: [W3C <line>](#)

4. The Text Tag (<text>)

Use Case: Used to draw text within the SVG graphic.

```
<svg width="200" height="50">
  <text x="10" y="30" fill="purple"
    font-size="20">Hello SVG</text>
</svg>
```

Result:

Hello SVG

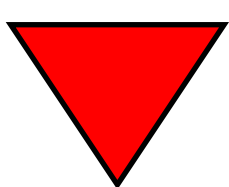

More Info: [W3C <text>](#)

5. The Path Tag (<path>)

Use Case: Used to define complex shapes using arbitrary lines and curves. It's the most powerful element.

```
<svg width="150" height="100">
  <path d="M 20 20 L 100 20 L 60 80 Z"
    stroke="black" fill="red" stroke-width="2"/>
</svg>
```

Result (Example of a simple triangle):

More Info: [W3C <path>](#)
